GET YOUR FLU AND COVID-19 VACCINES

Getting annual flu and COVID-19 vaccines this fall helps to protect you, your loved ones, and your community against illness, hospitalization, and death. The Delaware Division of Public Health (DPH) reminds Delawareans six months of age and older to get their annual flu and COVID-19 vaccines. Flu and COVID-19 vaccines are available to the public from health care provider offices, area pharmacies (including grocery store pharmacies), health centers, urgent care clinics, and community-based vaccination events. State of Delaware Group Health Insurance Plan members can obtain flu vaccines and COVID-19 vaccines at no cost when using their Highmark Delaware or Aetna health plan or CVS Caremark prescription plan at in-network providers, including local participating pharmacies like Walgreens, Rite Aid, and CVS. Contact your pharmacy before going, as an appointment may be recommended or required to receive vaccines.

Employees/retirees and their dependents (age limits may apply) without insurance or those on Medicaid or Medicare may receive vaccines for flu and COVID-19 at Public Health Clinics. Division of Public Health (DPH) mobile units offer flu and COVID-19 vaccines and additional health services at community-based locations.

Check flu.delaware.gov regularly for updates from the Division of Public Health (DPH) on the 2023-2024 flu season in Delaware. Find COVID-19 information at MyHealthyCommunityDelaware. CDC also has information on the flu and COVID-19.
