

Truven Quarterly Utilization and Trends Report

Overview/background

- The SEBC has expressed an interest in receiving enhanced reporting and utilization data for the GHIP population on an ongoing basis, specifically to:
 - Monitor population health and identify key drivers of recent plan experience
 - Measure the effectiveness of strategic initiatives approved and implemented by the SEBC
- DHR and Willis Towers Watson (WTW) worked with Truven to develop a reporting package for distribution to members of the SEBC
 - Reporting will generally reflect a rolling 12-months of data compared to prior period, and be distributed every quarter approximately 4 months after the close of the quarter
 - Reporting package will include an executive summary and key highlights; certain metrics and observations may be brought in front of the SEBC, but the intent is for any detailed discussions to be held outside of monthly SEBC meetings
- Truven has developed a first report based on 12 months of incurred claims through FY17 Q3 (4/1/2016 – 3/31/2017) compared to the prior 12 month period, which can be found on the following pages
